

JOB DESCRIPTION / PERSON SPECIFICATION

Job Title: Electrical Services Engineer

Reporting to: Operations Manager

Purpose of Role: To deliver power and energy management tools to high-end users / producers of electricity.

Key Duties and Responsibilities:

- Advising clients on MV power distribution and components
- Preparation of reports, O&M manuals and other documentation as requested by the Operations Manager
- Integration of hardware and software devices using communications protocols such as ModBus / OPC.
- Research and development of innovative solutions for power and energy management
- Assisting with power quality surveys
- Working with clients company internal team members and, in some instances, leading teams on customer sites
- Communicating project updates to Operations Manager as required
- Completing work to agreed deadlines
- Training / coaching clients' staff in use of software and electrical equipment
- Differentiation between problems which they can resolve and more strategic issues which should be referred upward
- Managing clients' expectations and also being proactive in identifying and meeting needs
- Preparation and planning of site work ensuring all necessary resources are available (materials and people)
- There is a requirement to travel on a regular basis; both within Ireland and abroad.
- To adhere to Premium Power's Health & Safety policy and procedures and those of client companies while on site.
